Bridging the Gaps Between Shopify & NetSuite

DATA AUTOMATION + FINANCE MASTER

Polus™ for eCommerce puts finance teams in control with clean, consistent, audit-ready data.

Ever wondered why fragmented data turns cash sales management into a costly guessing game, riddled with errors, delays, and hidden risks? **It's the gaps caused by bad data and manual management.**
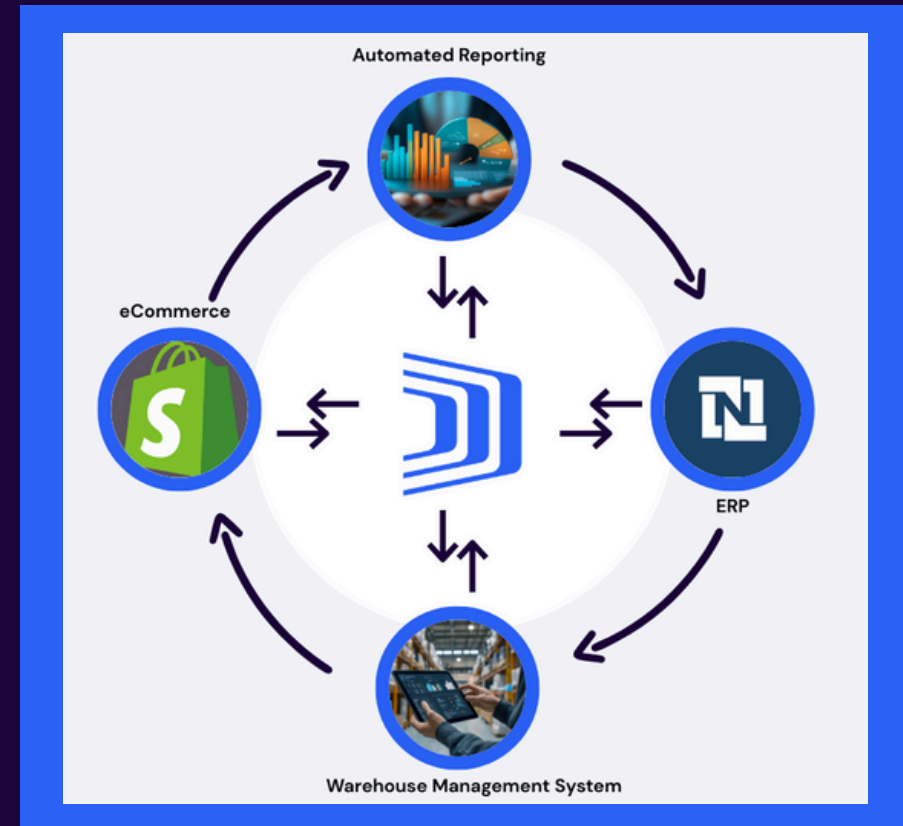

Polus for eCommerce automates cash sales, inventory reconciliation, and transaction alignment across Shopify and NetSuite—eliminating manual work, SKU inconsistencies, and revenue recognition delays. Built for finance and operations, it replaces brittle ETL and iPaaS tools with governed, source-level data unification that doesn't rely on fragile pipelines or per-connector fees.

The result is a trusted, real-time view of sales, returns, and inventory—enabling faster closes, cleaner audits, and confident forecasting. Polus streamlines reconciliation, sharpens margin visibility, and frees your team from time-consuming cleanup, so you can focus on driving profitability and capital efficiency.

> Datagence has been instrumental in creating a seamless data connection between our internal systems and client platforms like Salesforce, NetSuite, Shopify, and our warehouse management systems. **With Datagence handling our data plumbing, we can focus on growth, knowing our operations are built on a solid, reliable foundation."**

Datagence eCommerce Solutions

PROBLEM	NEGATIVE IMPACT	SOLUTION	VALUE DELIVERED
Broken Shopify-NetSuite Sync	Reconciliation often consumes significant time (e.g., partial automation still leaves gaps), delaying closes by days due to data silos and errors.	Datagence's unified pipelines with validation and cleansing addresses sync issues and detects data anomalies.	**Reduces manual work and speeds closes via trusted, automated data.**
Inventory & COGS Mismatch / Lack of Product Master	Leads to overstated/understated COGS, inaccurate margins, and stock issues, impacting financial reporting and operations.	SKU mapping and reconciliation fit Datagence's data enrichment and governance ensures accuracy.	**Creates Product Master and improves margin accuracy and stock optimization.**
Revenue Recognition Errors	Non-compliance with ASC 606 risks audits, misleading metrics, and valuation hits; common in e-commerce.	Event-based alignment possible via data workflows; deferred tracking supported by validation and SOC 2 audit frameworks.	**Ensures audit-readiness and confidence with governed data.**
Sales Tax & Global Tax Risk	Misreporting exposes penalties; e-commerce growth amplifies nexus and filing complexities globally.	Enriched data and audit trails support tax engines; compliance via quality standards aid filings.	**Boosts compliance and accurate filings.**
Inaccurate Forecasting & Planning	Poor data hinders runway modeling, hiring, inventory planning; biases and volatility compound issues.	Real-time, validated data feeds enable trusted FP&A; aligns with Datagence's focus on decision-ready data.	**Supports confident, accurate planning.**
